***Banyan Treatment Center opens their first Residential Mental Health Program  
in Boca Raton, Florida, helping those in need of treatment for mood  
and thought disorders at the in-patient level of care.***

11/07/17 Boca Raton, FL- Banyan Treatment Center has opened their first dedicated mental health program in Boca Raton, FL. Within 24 hours of the official grand opening every bed in the program had been filled. With a mental health license administered by the Agency for Healthcare Administration (AHCA), Banyan offers treatment for adult men and women suffering from mood and thought disorders. Banyan obtained licensure by meeting the highest quality standards of care set by AHCA; it is a license held by only a handful of facilities in Palm Beach County, Florida. The Mental Health Program at Banyan offers safe and secure housing where patients stay while receiving treatment.

With five locations across the country, Banyan Treatment Center stands as a leader in providing growth through recovery from both mental health and addiction issues. Banyan's expansion of mental health services comes in response to a dire need within our communities. Quality, residential treatment for mental illness is difficult to find. For individuals suffering from bi-polar disorder, schizophrenia and schizoaffective disorders, depression and anxiety, inpatient care is both effective and beneficial. The typical length of stay at Banyan's Mental Health Program is thirty days. Rob Cole, LMHC, Clinical Director of Mental Health Services at Banyan Treatment Center explains that "longer term care generates better outcomes" when it comes to mood and thought disorders.

In addition to mental health services, Banyan Treatment Center offers a full continuum of care for those suffering from substance use disorders. Recognizing that the two can be intertwined, Banyan offers co-occurring disorder treatment as well. With medical staff on site at the Boca Raton facility and a wide range of ancillary wellness services available, patients' full scopes of needs can be addressed, enabling them to live happier, healthier lives.
