

**Substance Abuse**  
Patient Outcome Study 2018

Providing *Growth* Through *Recovery*.

## Summary of the Processes

The results shown on the following pages demonstrate the effectiveness of Banyan Treatment Center's treatment programs. A large percentage of adults successfully completed treatment and reported continuous abstinence after treatment. Clients, families, and referral sources also reported a high level of satisfaction with programs and services.

### The Study

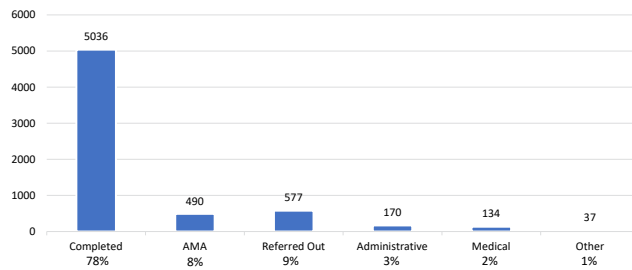

Banyan Treatment Center, a leading national provider of substance abuse and mental health treatment services, conducted a study to determine client outcomes regarding success in recovery following treatment. From this data we were able to study recovery and whole-person outcomes of individuals who completed treatment at Banyan Treatment Center. Client data is self-reported.

### The Sample

Banyan Treatment Center analyzed data from patients who received care during the year of 2018. The sample used in the outcome analysis included 4,351 patients who self-reported information upon admission and 2,184 patients who self-reported upon discharge. There were 6,492 patients admitted ranging in age from 18 to 81 years, with an average age of 36. Of those who were included in the study, 67% were male and 33% were female.

## Summary of the Data

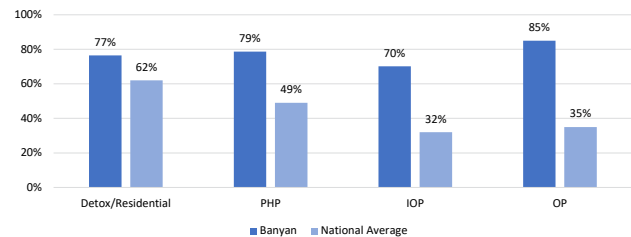

### Completion Data\*

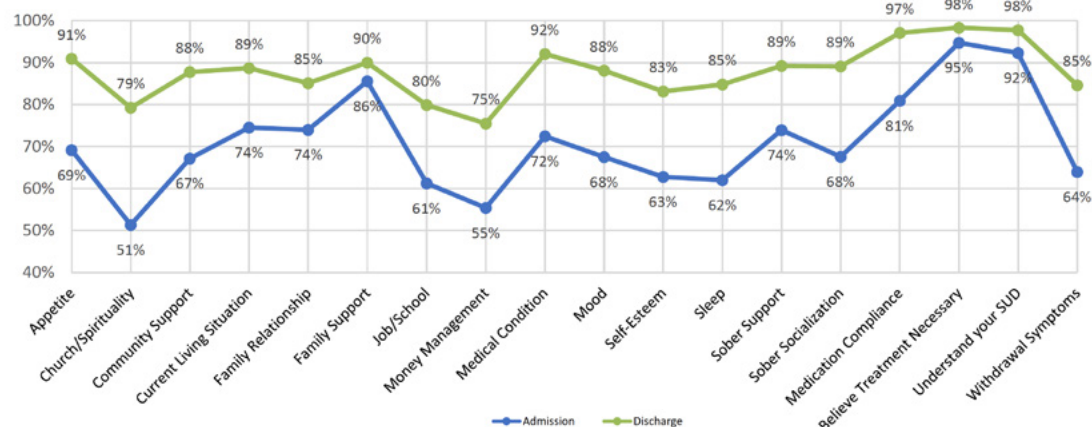

\* n = 6,492 admissions

\*\*Data retrieved from SAMHSA Treatment Episode Data Set

### Banyan vs. National Average\*\*

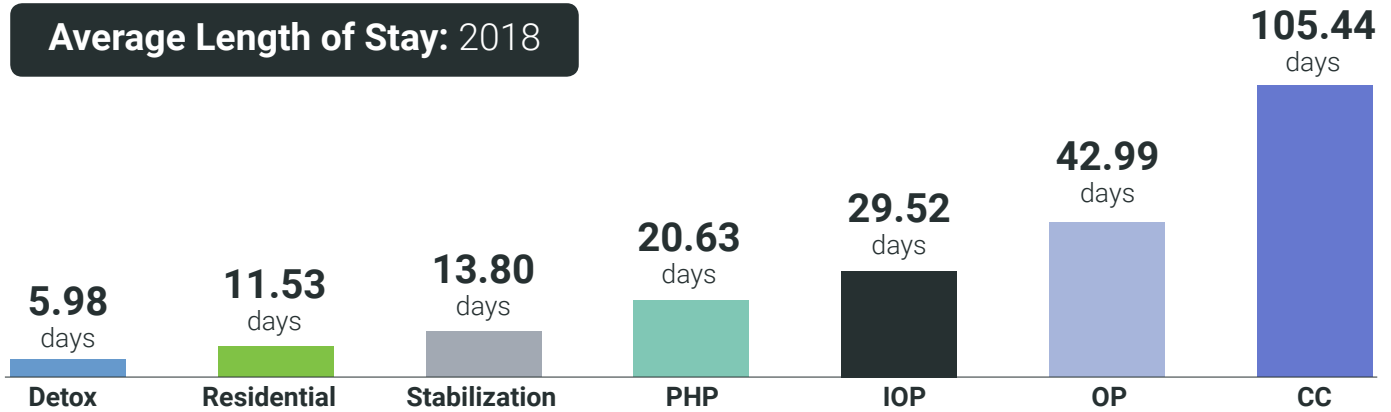

### Personal Growth\*

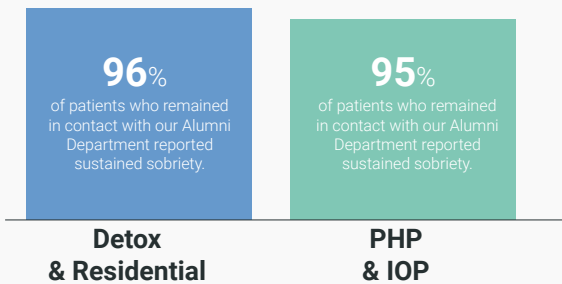

\*n = 4,351 admission surveys, 2,184 exit surveys completed

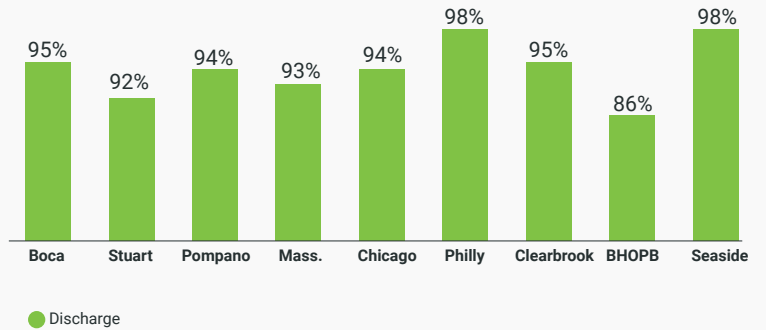

### Average Length of Stay: 2018

### Abstinence at Each Assessment Point

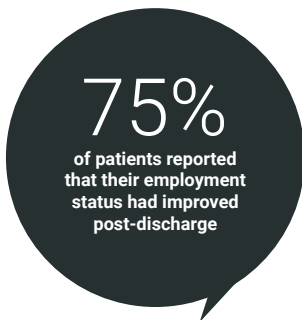

### Satisfaction Survey Scoring Analysis

\* Follow-up calls are placed 72 hours after discharge, 30, 60, and 90 days post-discharge, followed by 6 and 9 months post-discharge, and then annually.

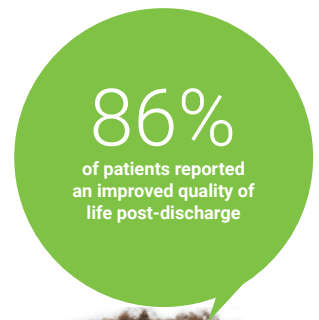

### Clients Employed

### Client Relationships

### Clients' Quality of Life
